Storage Water Heaters

JAL water storage heaters come in various shapes and sizes to suit the needs of various households and commercial establishments. These water heaters are highly energy efficient and are 4 star rated by the Bureau of Energy Efficiency (BEE). The range comes with variety of features, such as Glass lined or stainless steel inner tanks, heating elements made of copper or incoloy, having hard rock PUF or double glass lined insulation to ensure an extended product life.

Come and experience the joy of warm bathing with our exclusive range of water heaters.

Installation

JAL Bath fittings and Bathwares are your prized possessions. To get the best out of these, please follow the simple guidelines given below, during the plumbing work:

- Keep the number of bends in the pipelines to the minimum as the bends in the pipeline account for loss of water pressure.
- To prevent air locking, all water supply lines should have vent pipes.
- The pipelines should travel straight and vertical as far as possible.
- Flush Valves and Flush Cocks need to be directly connected to over head tanks through 1", 1¼" or ½ water supply lines, as required, for effective flushing. It is, therefore, most important to inform your plumber about your choice of flushing system for positioning the water supply lines correctly.
- It is preferable to use ¾" pipe for water supply to other faucets.
- It is advisable to check the concealed fittings for proper functioning before plastering and tiling.
- Please ensure that the concealed fittings are installed with the 'Arrow' mark in line with the direction of flow of water.
- The water outlet in the overhead tank should be kept at least 4" above the base level of the tank to prevent blockage due to entry of any foreign particles and other deposits.
- Geysers should be installed close to the point of usage to reduce heat loss.
- For hot & cold water mixers, it is advisable to supply the cold water also from the overhead tank for proper mixing and to prevent reverse flow.
- During installation, plumbing and other masonry work, the faucets should be kept covered with cloth or polythene to prevent any damage.
- The foam flow aerators need periodic cleaning to remove scale deposits and other particles.
- Do not use any strong detergents or acids for cleaning of faucets. Normal regular cleaning with a soft cloth, using solution of mild soap with water , shall eliminate chances of scale deposits and keep the faucets ever shining. We recommend usage of *"Jal Care"*.
- To keep the protective layer of coat intact on the gold plated and other special coated parts, prevent any damage by sharp objects.
- Faucets carry a warranty of

All Plastic, Acrylic, ABS, Electrical and Electronic components carry a warranty of 1 year.
- Kitchen Sinks carry a

against cracks.
- Please purchase JAL products from company's authorized stockists only to enjoy the benefits of warranty and any after sales service, if required.
- For any assistance, please contact the nearest JAL stockist or the Marketing Co-ordinator.

- The adornments shown are not part of standard bath fittings.
- The designs are subject to change without prior notice.
- Please do specify the choice of surface finish while placing an order.

THINK Green

Save Water

- Close the tap while shaving and brushing.
- Rectify all leaking taps.
- Use washing machines and dish washers with full capacity.
- Wash cars with bucket and not with running water.

Save Fuel

- Make car pools while going to common places.
- Get checked your vehicle's air filters regularly.
- Do not over drive, as it consumes more fuel.
- Stop vehicle engine at red signals.

Save Trees

- Plant as many trees as possible.
- Make use of internet and mobile phones to promote paper less communication.
- Use paper which comes from the recycled sources.

Save Energy

- Use solar energy as much as possible.
- Use natural lighting in homes and offices.
- Turn off electrical gadgets when not in use.
- Use cold water for washing clothes.
